QuickBooks Automation Details

Innovative Carriers · Nov 10, 2026 · @Moshe

Overview

The system reads QuickBooks reports every working day, checks carrier statements against them, sends customer statements from the accounting inbox every Monday, tracks the replies, and shows everything on a password-protected dashboard page.

This sheet lists every detail agreed so far. Please read each section and mark anything that is wrong or missing. Items marked *(suggested)* are my proposal and still need your OK.

The five parts:

1. **QuickBooks reports** arrive by email Monday to Friday at 11 AM.
2. **Carrier statements** in your inbox or in accounting are checked line by line against QuickBooks.
3. **Customer statements** go out every Monday from the accounting inbox to each customer's Primus Accounting Contacts.
4. **Replies** are sorted by AI, disputes are tracked, and requested invoices are sent from Primus.
5. **The dashboard page** shows all of it, plus your emails sorted by category.

1. QuickBooks reports

QuickBooks Enterprise 24 emails its reports to the accounting inbox Monday to Friday at 11 AM, using its built-in Scheduled Reports.

- **Schedule:** Monday to Friday at 11 AM. Nothing runs on Saturday or Sunday.
- **Computer:** your computer. It has to be on and awake at 11 AM, and it must be the computer where the schedule is set up.
- **Sent to:** the accounting inbox Jerry already reads, with a fixed subject so a report is never mistaken for an invoice.
- **Format:** PDF. That's the only format QuickBooks can schedule.

- **Full breakdown, not totals:** every open invoice and unpaid bill is listed line by line. Statements list each invoice, and duplicate checks work per bill, so totals alone aren't enough.
- **Reports in each email:**
  - Unpaid Bills Detail
  - Open Invoices
  - Bills entered or changed this week and last week
  - Payments received
- **One-time start:** you export 6 to 12 months of bill and invoice history to Excel, like the vendor and customer files you sent. This keeps the daily reports small.
- **Safety checks:**
  - each report's total is compared with its lines, and a mismatch means that day's data isn't used
  - if the reports haven't arrived by 11:30 AM on a working day, you get an email and it shows on the dashboard
- **Backup option:** if the PDFs turn out hard to read, QuickBooks Web Connector can be used instead.

2. Your inbox

The system connects to your inbox only to read carrier statements. Customer statements are sent from the accounting inbox, not from your email.

Reading

- From a start day we pick, it reads every new email, read or unread.
- It never goes back to older emails, and never reads the same email twice.
- Once a statement is checked, the email is marked as read. If a statement is still unread, it wasn't processed.
- The dashboard is the real record of what was processed, in case you open a statement before the system checks it.
- If your Outlook rules move emails into folders, it reads the folders you name.

What it never does

- Deletes anything
- Sends anything from your email

If the connection stops, for example after a password change, you get an alert. After it's reconnected, it catches up on the emails it missed.

3. Checking carrier statements

Every line on a carrier statement is matched to QuickBooks and given a status, and open lines are re-checked after each 11 AM report.

- **Where statements come from:** your inbox and the accounting inbox. If the same statement arrives in both, or twice, it's shown once.
- **What it reads on each line:** invoice number, load number, PRO, date and amount.
- **How it matches:** by the carrier's invoice number, the load number or the PRO. Your bills already carry "BOL Number … - PRO Number …" in the memo, so matching is reliable.
- **What it adds:** POD, added-charge and dispute status from Jerry, the existing automation.
- **Differences:** any difference in amount is flagged, even a few cents.

Status	Meaning
Entered	The bill is in QuickBooks with the same amount
Paid	The bill is in QuickBooks and paid
Not entered	No matching bill in QuickBooks
Amount different	The bill is in QuickBooks with a different amount
Waiting for POD	Jerry is still waiting for the POD
Waiting on added charges	An extra charge is waiting for a decision
Waiting on dispute	A charge on this load is being disputed with the carrier
Possible double bill	The same carrier and load appear on more than one bill *(suggested)*
Not found, check manually	The invoice is older than the history we loaded

- **Timing:** a statement that comes in before 11 AM is checked against the previous day's data until the new report arrives.

- **Updated statements:** if a carrier sends an updated statement, both are kept and linked.
- **Hard to read:** a line with no invoice number is matched by load, amount and date, otherwise it's marked for review. Scanned statements, Excel files and statements in the email body are read where possible, and the rest is flagged.
- **Name differences:** a carrier name that's spelled differently from QuickBooks is matched through a name table, and new names are flagged.
- **Several statements in one email:** each one is handled separately.

4. Duplicate detection

Both carrier bills and customer invoices are checked for duplicates every day, and each possible duplicate is flagged for you to confirm. Nothing is changed in QuickBooks.

Carrier bills are flagged when:

- the same carrier invoice number is entered twice
- the same carrier and load appear on two bills
- the same carrier, amount and date appear twice (suggested)

Customer invoices are flagged when:

- the same load is invoiced twice. The system knows the load from the invoice number, since Jerry keeps a permanent record of every invoice it sent (invoice number, load and customer).
- the same customer, amount and P.O. or reference appear twice. This covers invoices Jerry didn't create, like manual invoices or invoices from before April.

5. Customer statements

Every customer with any balance gets a statement every Monday from the accounting inbox, sent to all of their Accounting Contacts in Primus.

When

- Mondays, at random times between 11:30 AM and 12:30 PM, so they don't look automated.
- If Monday is a Jewish holiday, including Chol Hamoed, they go out on the next working day. Regular US holidays don't change anything.

- If that day's QuickBooks reports didn't arrive, or a report total doesn't match, nothing goes out and you get an alert.
- If sending stops partway, only the unsent statements are retried, so nobody gets two.

Who gets one

- Every customer with a balance, however small. There's no minimum.
- Customers with a credit balance too. The email says they have a credit of $X.
- A customer with 2 brands is 2 separate customers, with 2 statements.
- A skip list on the dashboard lets you stop statements for any customer.

Sent from and to

- From the accounting inbox.
- To all contacts marked as Accounting Contacts in Primus, the same people who get invoices. Changes per customer can be made later.
- The QuickBooks customer code, like "Ace Janitorial-AC1365", is the same code as in Primus, so it's used to match the customer.

The CSV file

- One CSV attachment per customer, in the same layout for everyone, with all open invoices.
- Columns: customer, load number, invoice number, invoice date, due date, status, days past due, amount and balance due.
- Each invoice is marked **PAST DUE**, **NOT YET DUE** or **IN DISPUTE**.
- The data comes only from QuickBooks, so an invoice stays on the statement until QuickBooks changes. That includes invoices a customer says are paid.

The email

- The AI writes it to sound like a person, based on the customer's situation. For example:
  - "You have an open dispute on load 12345 that is still not resolved, here is your updated statement."
  - "You have 2 invoices 60 days past due."
  - "Thank you for your payment of $1,200."
  - "None of your invoices are past due."
- It gives totals by age, like 1 invoice 45 days old and 13 shipments 60 days old, leaving out disputed invoices.

- The system calculates every number itself. If the email contains a number that doesn't match, it isn't sent and gets flagged.
- A thank-you is written only for a payment that shows in the payments report.
- The design and wording will be finalized together with you.

When a statement is held

- If a load, customer or contact can't be found in Primus, that customer's whole statement is held. It's flagged on the dashboard and you get an email.
- Once it's fixed, it goes out right away with the latest data. If it's fixed on Friday afternoon, Shabbat or a holiday, it goes out on the next working day.
- An email that bounces is flagged on the dashboard. No other address is tried.

First weeks: you approve the statements on the dashboard before they go out *(suggested)*. If they aren't approved by 11:30 AM, they wait and you get a reminder.

6. Customer replies

The AI reads each reply to a statement and gives the customer a status. The only thing it does on its own is send an invoice the customer asked for.

Status	What it means	What happens
Not responded	No reply to this week's statement	Tracked per statement, each week
Replied paid	The customer says they paid	Listed under its own tab only. Nothing is marked paid, because payment has to be verified in the bank.
Open dispute	The customer disputes an invoice	Saved, shown as IN DISPUTE on the next statement, closed only when someone clicks Resolve (section 7)
Invoice requested	The customer asks for an invoice	The invoice is sent from Primus automatically
Needs review	Anything else, or the AI isn't sure	A person handles it

Rules

- Everything other than invoice requests is answered by the people copied on the email.
- Anyone replying to a statement can get invoices for their own company. If the load doesn't belong to that customer in Primus, it goes to Needs review, so nobody gets another company's invoice.
- If one reply has a dispute and an invoice request, the dispute is marked and the invoice is sent.
- An invoice that isn't created yet, for example one waiting for a POD, isn't sent and goes to Needs review. So does "send me all my invoices" without a load or invoice number.
- A customer who writes a new email instead of replying is handled like any other email, with no automatic invoice.
- A reply about an older statement is linked to that statement.
- On Shabbat and Jewish holidays, automatic invoices wait until the next working day.

Making sure the AI judges replies correctly

- **Shown with proof:** each status shows the sentence from the reply it was based on, so it can be checked in seconds.
- **When unsure, it doesn't guess:** unclear replies go to Needs review. An unclear dispute is treated as a dispute, since closing an extra one is easy.
- **Test before going live:** 100 to 200 real past customer replies are labeled by hand, and the AI has to match them. The target is no wrong automatic invoices.
- **Watch-only start:** for the first few weeks the AI labels replies but sends nothing. Automatic invoices turn on only after the results are good.
- **Correct button:** any status can be changed on the dashboard. The change is recorded with who made it, and it's added to the test set.
- **Weekly check:** a short summary, like "48 replies, 2 corrected", plus an alert if corrections go up.

7. Disputes

A dispute stays open until someone clicks Resolve on the dashboard and picks what happened. There are two kinds, and they're shown separately.

Customer disputes (on an invoice already billed)

- They're marked when a customer disputes an invoice in a reply.

- A dispute with no load named is saved at customer level, for someone to fill in.
- The invoice shows as **IN DISPUTE** on every statement until it's resolved, and it's left out of the past-due totals.
- The email mentions open disputes, for example "You have an open dispute on load 12345 that is still not resolved."
- If a customer says it's settled, it stays open until someone clicks Resolve.
- If QuickBooks shows a disputed invoice as paid, it stays open and is flagged for Resolve.

When you click Resolve, you pick	What the system does
Invoice stands	IN DISPUTE is removed, and the invoice goes back into the aging and past-due totals on the next statement
Invoice changed (credit or new amount)	It waits for the change in QuickBooks. When the next report shows the new amount, it closes on its own. A different amount gets flagged.
Corrected invoice needed	Same as above, and once QuickBooks matches, the corrected invoice is sent to the customer from Primus

After a dispute is resolved, the invoice's age counts from the original invoice date, the same way QuickBooks ages it *(suggested)*.

Carrier charge disputes (before the customer is billed)

- When an extra charge isn't approved, Jerry drafts a dispute to the carrier and holds the load. It isn't billed to the customer.
- The load shows as "Waiting on dispute" on the carrier statement check.
- Resolve on the dashboard puts it back into billing (suggested):
  - **Charge approved:** billing continues with the charge.
  - **Charge dropped:** billing continues without it.
  - **Waiting for corrected invoice:** billing continues when the carrier's corrected invoice arrives. Jerry already reads a CORRECTED or REVISED invoice and ignores the original.

8. Forwarding replies

When an email goes out with company people copied and the customer replies only to the sender, the system forwards the reply to the people who were dropped.

- **Which emails:** statements and all other emails sent from the accounting inbox.
- **Who gets the forward:** only company addresses that were on the original email, never outside people.
- **Not forwarded:**
  - out-of-office messages
  - replies from our own staff
  - a reply that was already forwarded
  - a reply with a changed subject or a new thread, since it can't be matched to the original
- **Private replies:** a customer who replies only to accounting on purpose is still forwarded.
- **Shabbat and Jewish holidays:** forwards wait until the next working day.

9. Your dashboard page

A password-protected page on the current Innovative dashboard shows everything the system does, and is where you approve, resolve and correct.

- **Carrier statements:** every statement received and the status of each load
- **Daily summary:** what changed after each 11 AM report. It's on the page, not sent by email.
- **Possible duplicates:** carrier bills and customer invoices, with an "OK, not a duplicate" button
- **Customer statements:**
  - statements sent, by customer
  - each customer's reply status, with tabs for Not responded, Replied paid, Open dispute, Invoice requested and Needs review
  - the sentence each status was based on, with a Correct button
- **Disputes:** open customer disputes and carrier charge disputes, shown separately, each with a Resolve button
- **Holds and errors:** held statements and why, bounced emails, missing reports

- **Approval:** the Monday approval during the first weeks
- **Skip list:** customers who should never get a statement
- **Your emails:** every email sorted by the AI into categories like statements, payment questions, remittances and customer requests. Each shows the sender, subject, date and a link to open it in Outlook. This shows where your time goes and what other repetitive work can be removed.
- **Access:** you, plus anyone you name, can see the page and click Resolve.

10. Records and alerts

Jerry now keeps every invoice record permanently, which is how a QuickBooks invoice number leads back to its load and customer.

Records

- Every invoice Jerry has sent since April 28 is kept: invoice number, load and customer. That's about 5,000 records today.
- Statement data for a shipment is removed once it's invoiced, paid and entered correctly in QuickBooks.
- Open disputes stay until someone resolves them.
- Every Resolve, Correct and approval is recorded with who did it and when.

Email alerts (also shown on the dashboard)

- QuickBooks reports missing by 11:30 AM on a working day
- A report total that doesn't match its lines
- A customer statement held
- The inbox connection stopped
- AI corrections going up

11. A normal week

The QuickBooks side runs Monday to Friday, and customer statements go out once a week on Monday.

When	What happens
All day, every day	Emails are read, carrier statements are checked, replies are sorted
Mon–Fri, 11 AM	QuickBooks reports arrive, open items are re-checked, duplicates are checked
Mon–Fri, 11:30 AM	Missing reports are flagged and you get an email
After the reports are read	The daily summary on the dashboard updates
Monday, 11:30 AM–12:30 PM	Customer statements go out from the accounting inbox
Saturday and Sunday	No QuickBooks updates
Shabbat and Jewish holidays	Forwards and automatic invoices wait until the next working day

12. Special cases

These are the less common situations and how the system handles each one *(suggested, unless you already decided it)*.

Situation	What the system does
A bill drops off the unpaid report	Shown as "no longer open", not "paid", unless the payments report confirms it. It could also be voided or deleted.
Partial payments, credits or unapplied payments	Statements show the balance QuickBooks shows. If the reports don't show these clearly, another report is added.
An open invoice with no load number, like a manual invoice	Matched by customer code and P.O. If that fails, the statement is held and flagged.
Monday's reports arrive late, like at 3 PM	Statements wait for you to choose: send that day or Tuesday
Primus is down on Monday	Retried during the sending window, then held and flagged

Situation	What the system does
A QuickBooks customer name doesn't match Primus	The customer code and the load's bill-to are used, and a mismatch is flagged
One QuickBooks customer's loads point to different Primus bill-tos	Held and flagged
All of a customer's invoices are disputed	The statement still goes out, with past-due totals at zero
A customer asks to stop getting statements	Added to the skip list after you OK it
A customer said "paid" and it's still open weeks later	Stays under Replied paid, and is flagged after a set number of days
A carrier invoice is older than the history we loaded	"Not found, check manually", not "Not entered"
